

UNINT Beamer Presentation Theme

Using $\LaTeX$ to prepare slides

Master's Degree in Computer Science

Andrea Gasparini (1234567)

Università
degli Studi Internazionali di Roma

This template is based on [UNINT Presentation](#) from [Federico Zenith](#) and its derivation [Beamer-LaTeX-Themes](#) from Liu Qilong

In the following you find a brief introduction on how to use $\text{\LaTeX}$ and the beamer package to prepare slides, based on the one written by [Federico Zenith](#) for [UNINT Presentation](#)

1 Introduction

► Introduction

► Personalization

► Summary

Beamer for UNINT slides

1 Introduction

- We assume you can use $\text{\LaTeX}$; if you cannot, [you can learn it here](#)
- Beamer is one of the most popular and powerful document classes for presentations in $\text{\LaTeX}$
- Beamer has also a detailed [user manual](#)
- Here we will present only the most basic features to get you up to speed

Beamer vs. PowerPoint

1 Introduction

Compared to PowerPoint, using $\text{\LaTeX}$ is better because:

- It is not What-You-See-Is-What-You-Get, but What-You-*Mean*-Is-What-You-Get:
you write the content, the computer does the typesetting
- Produces a pdf: no problems with fonts, formulas, program versions
- Easier to keep consistent style, fonts, highlighting, etc.
- Math typesetting in $\text{\TeX}$ is the best:

$$i\hbar\frac{\partial}{\partial t}\Psi(\mathbf{r},t) = -\frac{\hbar^2}{2m}\nabla^2\Psi(\mathbf{r},t) + V(\mathbf{r})\Psi(\mathbf{r},t)$$

Getting Started

Selecting the UNINT Theme

To start working with `unintbeamer`, start a $\text{\LaTeX}$ document with the preamble:

Minimum UNINT Beamer Document

```
\documentclass{beamer}
\usetheme{unint}
\begin{document}
\begin{frame}{Hello, world!}
\end{frame}
\end{document}
```

Title page

1 Introduction

To set a typical title page, you call some commands in the preamble:

The Commands for the Title Page

```
\title{Sample Title}  
\subtitle{Sample subtitle}  
\author{First Author, Second Author}  
\date{\today} % Can also be (ab)used for conference name &c.
```

You can then write out the title page with `\maketitle`.

To set a **background image** use the `\titlebackground` command before `\maketitle`; its only argument is the name (or path) of a graphic file.

If you use the **starred version** `\titlebackground*`, the image will be clipped to a split view on the right side of the title slide.

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists
- These can be uncovered in sequence

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists
- These can be uncovered in sequence

Code for a Page with an Itemised List

```
\begin{frame}{Writing a Simple Slide}  
  \framesubtitle{It's really easy!}  
  \begin{itemize}[<+>]  
    \item A typical slide has bulleted lists  
    \item These can be uncovered in sequence  
  \end{itemize}\end{frame}
```

Changing Slide Style

2 Personalization

- You can select the white or *maincolor* **slide style** in the preamble with `\themecolor{white}` (default) or `\themecolor{main}`
 - You should *not* change these within the document: Beamer does not like it
 - If you *really* must, you may have to add `\usebeamercolor[fg]{normal text}` in the slide
- You can change the **footline colour** with `\footlinecolor{color}`
 - Place the command *before* a new frame
 - There are four “official” colors:  `maincolor`,  `unintyellow`,  `unintgreen`,  `unintdarkgreen`
 - Default is no footnote; you can restore it with `\footlinecolor{}`
 - Others may work, but no guarantees!
 - Should *not* be used with the `maincolor` theme!

Blocks

2 Personalization

Standard Blocks

These have a color coordinated with the footline (and grey in the blue theme)

```
\begin{block}{title}  
content...  
\end{block}
```

Colour Blocks

Similar to the ones on the left, but you pick the colour. Text will be white by default, but you may set it with an optional argument.

```
\begin{colorblock}[black]{unintlightgreen}{title}  
content...  
\end{colorblock}
```

The “official” colours of colour blocks are:

 unintlilla,  maincolor,
 unintdarkgreen, and  unintyellow.

Using Colours

2 Personalization

- You can use colours with the `\textcolor{<color name>}{text}` command
- The colours are defined in the `unintcolor` package:
 - Primary colours:  `maincolor` and its sidekick  `unintgrey`
 - Three shades of green:  `unintlighthousegreen`,  `unintgreen`,  `unintdarkgreen`
 - Additional colours:  `unintyellow`,  `unintred`,  `unintlilla`
 - These may be shaded—see the `unintcolor` documentation or the [UNINT profile manual](#)
- Do *not* abuse colours: `\emph{}` is usually enough
- Use `\alert{}` to bring the focus somewhere

Using Colours

2 Personalization

- You can use colours with the `\textcolor{<color name>}{text}` command
- The colours are defined in the `unintcolor` package:
 - Primary colours:  `maincolor` and its sidekick  `unintgrey`
 - Three shades of green:  `unintlighgreen`,  `unintgreen`,  `unintdarkgreen`
 - Additional colours:  `unintyellow`,  `unintred`,  `unintlilla`
 - These may be shaded—see the `unintcolor` documentation or the [UNINT profile manual](#)
- Do *not* abuse colours: `\emph{}` is usually enough
- Use `\alert{}` to bring the focus somewhere
- If you highlight too much, you don't highlight at all!

Adding images

2 Personalization

Adding images works like in normal $\text{\LaTeX}$:

Code for Adding Images

```
\usepackage{graphicx}  
% ...  
\includegraphics[width=\textwidth]  
{assets/logo_RGB}
```

Splitting in Columns

2 Personalization

Splitting the page is easy and common; typically, one side has a picture and the other text:

This is the first column

And this the second

Column Code

```
\begin{columns}
  \begin{column}{0.6\textwidth}
    This is the first column
  \end{column}
  \begin{column}{0.3\textwidth}
    And this the second
  \end{column}
  % There could be more!
\end{columns}
```

Special Slides

2 Personalization

- Chapter slides
- Side-picture slides

Chapter slides

2 Personalization

- Similar to frames, but with a few more options
- Opened with `\begin{chapter}[<image>]{<color>}{<title>}`
- Image is optional, colour and title are mandatory
- There are seven “official” colours:  `maincolor`,  `unintdarkgreen`,  `unintgreen`,  `unintlighgreen`,  `unintred`,  `unintyellow`,  `unintlilla`.
 - Strangely enough, these are *more* than the official colours for the footline.
 - It may still be a nice touch to change the footline of following slides to the same color of a chapter slide. Your choice.
- Otherwise, `chapter` behaves just like `frame`.

- Opened with
`\begin{sidepic}{<image>}{<title>}`
- Otherwise, sidepic works just like frame

Fonts

2 Personalization

- The paramount task of fonts is being readable
- There are good ones...
 - Use serif fonts only with high-definition projectors
 - Use sans-serif fonts otherwise (or if you simply prefer them)
- ... and not so good ones:
 - Never use monospace for normal text
 - Gothic, calligraphic or weird fonts: should always be avoided

Look

2 Personalization

- To insert a final slide with the title and final thanks, use `\backmatter`.
 - The title also appears in footlines along with the author name, you can change this text with `\footlinepayoff`
 - You can remove the title from the final slide with `\backmatter[notitle]`
- The aspect ratio defaults to 16:9, and you should not change it to 4:3 for old projectors as it is inherently impossible to perfectly convert a 16:9 presentation to 4:3 one; spacings *will* break
 - The `aspectratio` argument to the `beamer` class is overridden by the UNINT theme
 - If you *really* know what you are doing, check the package code and look for the `geometry` class.
